To Whom It May Concern,

Hello,

My name is Doris Rodriguez and I oppose the addition of over 17,000 new housing units. There are so many areas of the city that are currently in need of revitalization, that is where the money and effort should be concentrated.

This is truly sad to read that this is even being proposed and most likely, regardless of what residents say, will come to pass. Does greed know no bounds. Just reading the provided Environmental Impact is enough to scrap the project. "Air Quality" – because who needs fresh air, "historic resources" – because who needs to remember the past, "Greenhouse Gas Emissions" – because protecting the only planet we have is surely someone else's problem, "Noise" – because current residents should not have an expectation of peace and quiet....

When will enough be enough. How many will you pack in and stack up before you are done? Please reconsider quality of life for everyone – including those that will be sardined in the Projects (new housing units) The estimate is 17,575 new housing units, we all know it will be more – it is always more.

Thank you for your time.

DR
